UHP-Microscope-LED-595
Ultra High Power LED Light Source for Fluorescence Microscopy

Introduction
The Ultra High Power (22Watt) LED 595 nm provides excellent replacement of conventional arc lamp sources in fluorescence microscopy. Many applications such as activation of a light-driven ion pump like Halorhodopsin (NpHR) in Optogenetics may benefit of this new LED light source. The UHP-Mic-LED-595 provides >650mW of collimated LED power on its output. The LED driver supports CW or fast TTL triggered operation.

Key Features
- Compatible with Prizmatix modular Microscope-LED Light Source products family
- TTL external triggering
- Excellent for fluorescence excitation
- Stable precisely adjustable power
- Long life (no lamp or laser tube replacement required)
- Speckle free
- Rapid warm up time

Applications
- Optogenetics – LED activation of Halorhodopsin (NpHR)
- Fluorescence microscopy with fluorophores Alexa Fluor 594, Texas Red, DyLight 594
- Whole body imaging of small animals in-vivo
- Photo activation (PA)
- Bio analysis
- Machine Vision

Benchtop LED Current Controller Specifications

Features
- Constant current or chopping modes
- Precise LED current setting by 10 turn dial
- TTL external trigger input
- Compact and robust enclosure

Optional Accessories

Filter Wheel:
The UHP-Mic-LED can equipped with a 6 positions filter wheel at the beam output. This accessory is especially useful for UHP-Mic-LED-White light source. Please see video clip http://www.youtube.com/watch?v=iv7dlwLHaUE for more details.

Fiber Coupler Adaptor:
The UHP-Mic-LED can be easily changed from direct microscope coupling to fiber coupled LED configuration by means of Fiber Coupler Adaptor (SMA, CF or ST connector). This adaptor can be easily assembled by a user on the Mic-LED output. Please see video clip http://www.youtube.com/watch?v=iv7dlwLHaUE for more details.

Liquid Light Guide Adaptor:
The Microscope-LED can be easily changed from direct microscope coupling to Liquid Light Gide coupled LED configuration by means of LLGA Adaptor. This adaptor can be easily assembled by a user on the Mic-LED output. Please see video clip http://www.youtube.com/watch?v=iv7dlwLHaUE for more details.

Collimator:
The output from optical fiber is divergent according to fiber NA. In order to reduce the divergence angle a collimator module can be used. Prizmatix collimator was especially designed to fit thick core high NA Polymer Optical Fibers. See more details at http://prizmatix.com/docs/collimator.cfm

Fiber Bundles:
To combine outputs of multiple LEDs a Y-shaped fiber bundle with two or more input branches can be used. Prizmatix can help to configure and build custom fiber bundles for specific applications. See more details at: http://prizmatix.com/docs/Custom_Fiber_Optic_Assemblies.cfm
