The Model S471 is a high-quality handheld optometer, ideal for all of your photometric, radiometric and fiber optic measurement needs. The S471 is designed to be used in a laboratory setting or field environment. The instrument is microprocessor controlled and has three measurement data-presentation options: direct display measurement with analog bar; RS-232 computer interface and analog voltage input.

In addition to its exceptional technical and functional characteristics, this system is fully compatible with all UDT Instruments sensor heads in any configuration. All calibrations are performed in Gamma Scientific’s NVLAP accredited testing laboratory.

Features

- High accuracy measurements
- Wide dynamic range
- Computerized high-speed update rate
- Programmable averaging readings in low pass or boxcar average
- Large calibration capacity
- Large monochrome LCD graphics/backlight
- Calibration data/accessories information display
- Long operational battery life or direct external power
- Simple touch keypad
- Portable and durable
- Optional USB to serial bridge converter

Model S471-LED Optometer
The UDT Model S471-LED handheld optometer is specifically configured for all your LED measurement needs. It is designed for use in a laboratory setting or production environment. The Model S471 is microprocessor controlled and has three measurement data-presentation options: direct display measurement with analog bar, RS-232C computer interface, and analog voltage input.

The unit comes standard with a photometric detector and LED holding sockets designed to meet the recommended CIE Publication 127 document on measurements of the luminous intensity (candelas) of LEDs. The sockets accommodate regular, miniature and sub-miniature LEDs and feature a locking flange that snaps firmly into a CIE Condition A or B baffle tube, ensuring precise alignment of the LEDs mechanical axis. In addition, the finger clamps and locking flange ensure the distance from LED tip to detector is precisely set and conforms to CIE Publication 127.

The sockets feature banana connectors for use with high-precision power supplies. Extra leads are provided to measure the junction resistance of the diode for monitoring the diode temperature.

For total luminous flux measurements (lumens), UDT offers integrating spheres designed specifically for LED measurements.

The UDT S471-LED comes with a world-class photopic fit that is unmatched by any other instrument. It can also be configured with a radiometric detector for radiant intensity and total radiant flux measurements.

In addition to its exceptional technical and functional characteristics, this system is fully compatible with all UDT Instruments sensor heads in any configuration, making it easy to configure your S471-LED to a wide variety of applications, including illuminance, irradiance, and fiber-optic measurements.

The system comes with a factory calibration which is traceable to the National Institute of Standards and Technology (NIST).
Model S471-LED Optometer

About UDT Instruments

For over 40 years UDT Instruments, a Gamma Scientific company, has been trusted by the world's leading organizations to provide accurate light measurement systems.

UDT Instruments manufactures precision photometers, radiometers, colorimeters and photosensors for optical measurement applications.

UDT Instruments designs the most accurate photometric filters in the world, with an unsurpassed ability to match the human eye's sensitivity to color and light intensity. Each sensor includes a NIST-traceable calibration.

High-performance optometers from UDT Instruments can be combined with our integrating spheres and detectors to create complete photometric and radiometric test systems with industry leading accuracy.

Features

- Meets CIE Publication
- World-Class Photopic Response
- RS-232C Computer Interface
- Compact and Light-weight
- Rechargeable NiMH Battery Powered

Applications

- Luminous/Radiant Intensity Measurements
- Total Luminous/Radiant Flux Measurements
- Research and Development Testing
- Device Brightness Measurements
- Tunnel Brightness Measurements
- Signal Brightness Measurements
- Equipment and Device Illumination Measurements

SYSTEM CONFIGURATIONS

Luminous Intensity:
Measurement Range:
CIE Condition A: 50 e-03 to 80,000 cd
CIE Condition B: 0.5 e-03 to 8,000 cd
Wavelength Range: 380nm - 780nm

Total Radiant or Luminous Flux:
Measurement Range: 100 e-09 watts to 3.5 watts
Wavelength Range: 350nm - 1100nm

LED Holders with Alignment Tool
Integrating Sphere for Total Flux
